

PlateLoop poster: A1 from 15 A4 sheets (home printer)

Print every sheet on A4 at 100% (Actual size, not "Fit"), landscape. Any printer works.

1. Lay the sheets out as numbered below: 3 across, 5 down.
2. On every sheet except the left column, cut along the LEFT crop marks.
3. On every sheet except the top row, cut along the TOP crop marks.
4. Slide each cut edge over its neighbour's 10 mm overlap until the picture lines up, then tape it from the back.
5. Trim the white margins around the outside last. The finished poster is exactly 594 x 841 mm.

PlateLoop

Know what's eaten. Waste less.

An AI food scanner that recognises every dish and measures what is served, eaten and left, down to the nutrients, so canteens cook the right amount and everyone who eats gets their own nutrition feedback.

1 The problem

755,000_t

of food was thrown away in Singapore in 2023. **Only about 18% was recycled.**

28%

of the world's food waste
restaurants and caterers

ECOLOOP HACKATHON · SI

od that is

Canteens **cook by guesswork**, because

WL

"I get the same big scoop as everyone, and I'm told to finish it."

Wei Ling, 15, student

ML

"I cook by feel. So much food comes back."

Mrs Lim, canteen owner

2

Our process

1

Empathise

Watched how lunch really runs, mapped four people it affects and read the research on each.

2

Define

One problem: kitchens can't see what is eaten, dish by dish and person by person.

3

Ideate

Compared five different weighing, surveying and a tray scan.

Face not recognised → type your class number

Clean-plate pressure → compared with your own usual

All

use nobody measures what people actually eat.
