

PlateLoop poster: A1 from 15 A4 sheets (home printer)

Print every sheet on A4 at 100% (Actual size, not "Fit"), landscape. Any printer works.

1. Lay the sheets out as numbered below: 3 across, 5 down.
2. On every sheet except the left column, cut along the LEFT crop marks.
3. On every sheet except the top row, cut along the TOP crop marks.
4. Slide each cut edge over its neighbour's 10 mm overlap until the picture lines up, then tape it from the back.
5. Trim the white margins around the outside last. The finished poster is exactly 594 x 841 mm.

PlateLoop

Know what's eaten. Waste less.

An AI food scanner that measures what is served, eaten and left on every tray, so canteens cook the right amount, and everyone who eats gets their own nutrition feedback.

1 The problem

755,000_t

of food was thrown away in Singapore in 2023. **Only about 18% was recycled.**

28%

of the world's food waste from
restaurants and caterers

ECOLOOP HACKATHON · SI

Avi · Akshaya · Di
Nicol

waste comes from **food service**: canteens,
erers.

8–10%

of global greenhouse gas emissions come from **food t**
lost or wasted.

Class 3A15

od that is

Canteens **cook by guesswork**, because

WL

"I get the same big scoop as everyone, and I'm told to finish it."

Wei Ling, 15, student

ML

"I cook by feel. So much food comes back."

Mrs Lim, canteen owner

2 Our process

1

Empathise

Watched how lunch really runs, mapped four people it affects and read the research on each.

Face not recognised → type your class number

2

Define

One problem: kitchens can't see what is eaten, dish by dish and person by person.

Clean-plate pressure → compared with your own usual

3

Ideate

Compared five different ways of weighing, surveying, and a tray scanner.

All

use nobody measures what people actually eat.

el. Some days half the kailan
"
en operator

NA

"By the time we notice a patient isn't eating, it's been days."
Nurse Aisha, Ward 7B

MT

"I want to build muscle, but I ha
idea what the canteen gives me
Marcus, office worker

design thinking, from lunch queue to

Prototype

Modelled the scanner in 3D, built its kiosk, a kitchen dashboard, three apps and a 3D game.

d five ways to measure: bin
surveys, photo apps, pre-orders
scan.

Alerts ignored → nurse actions in one tap

Test

Walked every step until it broke, t
each problem into a feature.

"Is it filming me?" → consent, no photos leave

I have no
s me."

ue to prototype

oke, then turned

Final prototype: PlateLoop Scanner

Look at the camera, put your tray down before you eat, and again after. The difference is what you ate, dish by dish, in about two seconds.

PlateLoop Kitchen CANTEEN STAFF

- ✓ **Tomorrow's order** from real attendance, weather and events.
- ✓ **Waste by dish**, so the kailan nobody eats gets smaller.
- ✓ **Carbon ledger**: CO₂ avoided, ready for reporting.

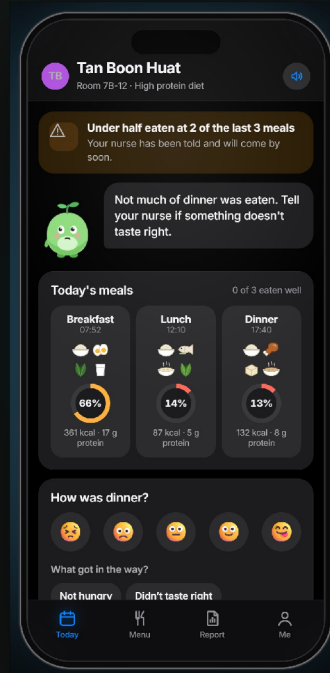

Loopi STUDENTS

- ✓ A **virtual pet** fed by the lunch you eat.
- ✓ **Food groups**, not calories.
- ✓ **Class races**, streaks and challenges.

-35%

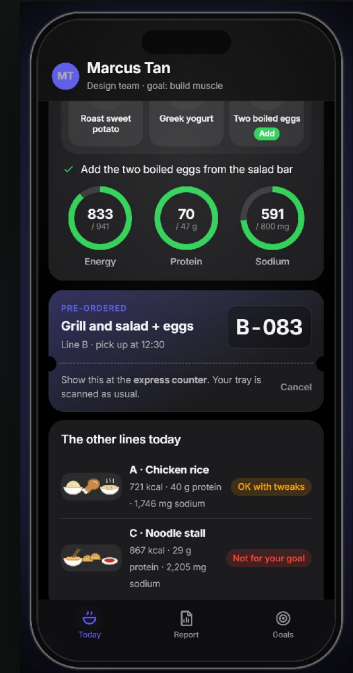

each built from research on the people

Loopi Care HOSPITALS

- ✓ **Every tray measured**, no food charts.
- ✓ Patients **choose tomorrow's meals**.
- ✓ Alerts reach the nurse **with the reason**.

29%

Loopi Work OFFICES

- ✓ A **daily pick** for your health goal.
- ✓ **Pre-order** and skip the queue.
- ✓ **Private**: teams, never names.

+51%

you really ate.
